PC TO PRINTER CABLES

Get maximum performance from your parallel port!

Key Features

- ▶ **Cables meet IEEE 1284 Enhanced Parallel Port standard.**
- ▶ **All IEEE 1284 connector combinations are available.**
- ▶ **Cables come in standard and custom lengths.**
- ▶ **Lifetime warranty!**

With the Parallel Printer Cable you can connect a standard IBM[®] PC parallel port to most products with Centronics[®] interfaces. However, it does not support Pin 14, autoseed, which some products' components may require.

Laser Printer Cable

The Laser Printer Cable is used to connect the DB25 female parallel port of an IBM or compatible PC to a Centronics parallel interfaced printer.

Enhanced Parallel Port Cables

Enhanced Parallel Port Cables are built to the IEEE 1284 specification for bidirectional parallel ports.

IEEE 1284 specifies how to expand the functionality of a PC by connecting a variety of high-performance peripherals to the parallel port. Ordinary parallel port cables are not IEEE 1284 compliant, do not support

1284 data rates, obstruct flawless connectivity, often degrade data, and are limited to extremely short distances.

IEEE 1284 specifies three connector types and cable electrical configurations. The connector types are DB25 male and female (1284A), 36-position Centronics male (1284B), and a mini 36-position Centronics male (1284C). The following combinations are available:

- 1284A (male)/1284A (male)
- 1284A (male)/1284A (female)
- 1284A (male)/1284B
- 1284A (male)/1284C
- 1284B/1284C
- 1284C/1284C

These cables are ideal for bidirectional parallel printing.

PC/XT Serial Printer Cable (28 AWG)

This cable connects a PC with a male DB25 serial port, to a serial printer or plotter.

AT Serial Printer Cables

The BC00801 connects a PC with an AT style DB9 male serial port to a serial printer/plotter with a DB25 female DTE-configured port.

The EVMBLJ is a LaserJet[®] serial printer cable (null modem). However, it is not a fully loaded cable. It has screw-on removable hoods and crimp pins. On one end it has a DB25 male connector; on the other end it has a DB9 female. Typically, it is used between two DCE or DTE devices.

Flexi-Lite Cables

These super flexible, lightweight cables with slimline 90° connectors are ideal for tight spaces where your PC is pushed up against a wall. They're compact and easy to carry, too—perfect for notebooks!

Ordering Information

ITEM	CODE
Parallel Printer Cable (18-conductor)	
DB25 male, Centronics® male	
6-ft. (1.8-m).....	BC00601
10-ft. (3.0-m).....	BC00602
20-ft. (6.1-m).....	BC00604
