13W3 Video Splitters

Broadcast computer video output to up to four monitors simultaneously.

Key Features

- ▶ Supports all computer workstations that use the 13W3 connector.
- ▶ Supports up to four monitors without losing resolution.
- ▶ Send displays up to 76 m (250 feet).
- ▶ Now accommodates SGI and Power PC products.

Technically Speaking

These Splitters can be used to connect more than one monitor to any computer with a 13W3 connector for its monitor output. The monitors can be located up to 7.6 m (250 feet) away from the splitter, depending on the operating resolution being used.

The Splitters both feature a bandwidth of 300 MHz and a 1-ns rise time for clear images at any resolution. They come in compact, all-metal desktop packaging with both input and output connectors conveniently located on the rear of each unit.

In a conference or demonstration room, the Splitter can feed the computer's own monitor, plus up to 3 additional monitors located around the room. This avoids people crowding around just one display.

Need more monitors? Cascade multiple Splitters for more complex arrangements. In a classroom, instructional material on your computer can be easily viewed by all the students from their desks.

And when you add Splitters, you also add to the distance you can send video signals.

For these and other components...
