ServMaster

Control, display, or broadcast to any kind of PC.

Key Features

- ▶ Access up to 255 PCs with several keyboards, monitors, and mice.
- ▶ Microprocessor-controlled keyboard and mouse switching and emulation for plug-and-play operation.
- ▶ Coax bus connection allows multiple units to be daisy-chained for local and remote control.
- ▶ Simplified single unit design.

Technically Speaking

The ServMaster enables you to take control, display, or broadcast to any kind of CPU from one location. Up to 255 CPUs can be linked together using an addressable bus system that gives you complete control.

The ServMaster works with all major operating systems and hardware, with or without LAN. You can use it for mixed types of CPU connections which eliminates the cost of new equipment and the hassles of installation.

Also, the long-distance keyboard drive capability means that no additional

hardware is required to amplify keyboard signals. A coax bus connection uses high-quality 13W3 video connectors for crystal-clear video even at long distances.

Other features include:

- Data on bus connection uses packetised network format

for fast and highly reliable delivery of keyboard, mouse, and control information.

- Front-panel DIP switch determines port numbers and establishes network address.

Specifications

Connectors — Bus: 13W3 female; CPU/Keyboard/Monitor/Mouse: DB25 female

Indicators — (3) LEDs: (1) power, (1) status, (1) send

Power — 115-VAC, 60-Hz adapter

Size —
11.4 x 34.3 x 12.4 cm
(4.5"H x 13.5"W x 4.9"D)

Weight — 5.4 kg (12 lb.)
