Technically Speaking

Get sturdy, reliable AMP connectors from Black Box!

The RS-232 Connector Kit (FTM850) contains twelve 25-position cable clamp (hood) assemblies, 18 plug (male) and 6 receptacle (female) 25-pin connectors, 100 pins and sockets, and an insertion/extraction tool. The components are divided into labeled compartments in the metal storage box.

The D-Style Crimp Tool (FT073), ordered separately, can help you install the connectors on your cables.

The kit is ideal for use in computer-room maintenance

and prototype assemblies. Use it to repair existing RS-232-type cases, or fabricate new ones.

Using the kit is easy, too. Follow these steps:

1. Select a cable clamp assembly, and a plug or socket and pins from the kit's case.
2. Using a D-style crimp tool, carefully strip your cable to the dimensions shown on the tool.
3. Slide the pin over the crimped conductor and crimp.
4. Crimp a pin on each conductor used in the cable assembly.
5. Insert the crimped conductors into the D shell as per pinout specification for your application.
6. Fasten the hood assembly around the D shell.
