NetMate 10 - Disc CD Server

66x performance for less than a basic 7-bay network tower!

Key Features

- ▶ Built in Network Attach Interface
- ▶ Mixed Media, CD, DVD, HD
- ▶ 32 Mb Cache
- ▶ i960 Processor performance
- ▶ 10/100 Ethernet connection
- ▶ Compatible with PC, MAC, Sun, Unix
- ▶ 10 Minute installation

Overview

Netmate offers peak performance access to multiple CD's/DVD. The network attach storage (NAS) solution provides simultaneous access by multiple users over the network. The system installs in ten minutes without the need for software or device drivers and requires little to no technical expertise. Netmate's unique disc caching system automatically caches up to 10 CD's or a combination of CD/DVD. The 10 CD's are housed in two 5-disc multi-changer drives doubling the performance of a conventional 10/100 tower, whilst offering true simultaneous access, and no spin-up delay commonly associated with CD access. Operating independence means a single source and location for all applications.

Technically Speaking

To set up Netmate requires a simple ARP/PING command from an IP-enabled PC to give the Netmate an IP address. The Netmate can then be accessed via any Web Browser. Netmate supports two modes of hard disc caching. Archive mode starts caching the disc as soon as it is inserted - providing 66x speed within 5 minutes and access up to 20 discs. Performance mode simultaneously reads off the CD as well as the hard drive cache for faster multi-user access, supporting up to 10 discs.

Specifications

Standards - ISO9660 (Joliet & Romeo), Rock Ridge, High Sierra, multi-session, HFS, hybrid CD: all media is available to all users.

Protocols - Netware Core Protocol, Microsoft Server Message Block, IP, AppleTalk File Protocol, UNIX Network File System
LAN - 10/100 UTP Ethernet,

Connectors - LAN: (1) RH-45F

Indicators - (1) LED per disc, (1) Power, (1) Network, (1) Status, (1) Drive.

Power - 230/115 VAC (switch selectable)

Size - 30H x 36W x 61Dcm.

Weight - 15.65kg.
