

## Firmware Revision Information

**Product Code(s):** *KV04U-REM, KV04AU-REM, KV04AUS-REM*

**Product Name(s):** *ServSwitch CX USB Remote User Station*

**Date Modified:** *April 17th, 2012*

---

### Version 1.17

- Added support for multiple keyboards and mice. It is now possible to support a maximum of three keyboards and three mice, making a total of six devices. This allows for support of keyboards with other devices off a USB hub.
- Card readers are not supported.
- Added support for full speed mice.
- Added support for the Logitech unifying receiver.
- Fixed an issue with the memory not being initialized correctly at power on. This meant that occasionally at power on the unit could get into a state where the keyboard or mouse failed to initialize or entered configuration mode, and required power cycling.

### Version 1.15b02

- Support for Man Machine membrane keyboard and a Cirque Keypad when used with CX UNO 1.07

### Version 1.13

- Fixed a rare video blanking bug when used with a 4-Port ServSwitch CX

### Version 1.12

- DIP switch 4 forces US Country Code. Placing DIP switch 4 in ON position means that when the keyboard is reconnected or the user station is power cycled, a US Country Code is sent to the SAM

### Version 1.11

- Several bug fixes to resolve lockups when used with CX and CX Uno in very rare cases
- Added support for 12-bit mice and improved mouse speed

### Version 1.09

- Some USB devices which are slow to start up could fail to start under certain conditions

### Version 1.05

- Initial Release
