# Black Box DCX3000 / DCX1000 Using the API

updated 2/22/2017

This document will give you a brief overview of how to access the DCX3000 / DCX1000 API and how you can interact with it using an online tool. It will not however go into the inner workings.

The API on the DCX technology adheres to RESTful and CORS standards, and can be downloaded from the DCX itself by following the URL:

#### http(s)://<IP ADDRESS>/rest-api

It is presented in YAML format, which is a human-readable data serialization language.

# YAML Tool

There is an online tool called Swagger that allows you to view the API in an easy format and interact with the API. The DDX requires internet access in order to achieve this.

Open a web browser and go to the Swagger online demo: <u>http://petstore.swagger.io</u>

At the top of the page, enter the URL of the DCX switch, including the path to the reset-api. Press Explore (i.e. <u>http://10.0.10.14/rest-api</u>)

🕀 swagger	http://10.8.20.99/rest-api	Explore

You will be presented with a list of API functions on the DCX. In order to perform any function, you need a token which is provided when you authenticate with the DCX. To acquire the token, click on Expand operations for the Auth function.

eost /auth	Aocal	Authenticate U	lver using Local st	rategy (Username/Password) and return 201
Implementat This endpoint returned (JW1 Response C DK Wodel Exam	ion Notes allows a user to be authenticated by username () which can be passed in the Authorization hea lass (Status 200) ple Value	password supplied over clear der of each subsequent API o	text (HTTPS sh all	ould be used). A JSON Web Token is

Now that you have a token, you can use any of the available functions. For example, to see the API version, expand the API operations and in the Authorization field under Parameters, enter the following format: bearer <token>

API Show/Hite List Operations Expand Operations Returns the current REST API version Version Response Class (Status 200) OK. Moduli: Example Value "version": "string" 4 Response Content Type application(son • Patameters Parameter Type Data Type Parameter Value Description Authorization bearer eyJ0eXAIOIJKV1GECJhbGciOiJIUzI1NLF JSON Web Tokan (JWT). header string Format: Bearer JWT Response Messages HTTP Status Code Reason Respinse Model Headers 491 Unauthorised. Invalid or no credentials provided. 403 Forbidden Try It out!

Press the "Try it Out!" button to execute the function. The response should look something like this...

Curl
curl -X GETheader 'Accept' application/json'header 'Authorization' bearer eyl@eXA1017KV1Q1LC1hbGc1017Duz11NL19.ey1p2C16M5w1a

Response Headers
<pre>{     "content-type": "application/json; charset=utf-a",     "ceche-control": "max-age=1, must-revalidate" }</pre>

# **Raw Connection Example**

Using Telnet and port 80, you can issue the HTML/JSON commands in a RAW form to the DCX. If you are writing a controller application, you will need to ensure it can handle HTML requests and parse the JSON responses appropriately.

A POST or PUT request must include the content length in the header as you would for any web service. The content length is the number of bytes (characters) in the body/payload of the request. If this number is not correct, you will either be disconnected form the DCX or receive an error.

The first function that you must perform is authentication with DCX to generate a token by sending your Admin login credentials that you use to log into the web interface. The token does not include the double quotes (\*).

## **Request:**

```
POST /api/auth/local HTTP/1.1
Host: 10.0.10.14
Content-Type: application/json;
Content-Length: 43
{"username":"admin","password":"password"}
```

## Response:

```
HTTP/1.1 200 OK
X-Powered-By: Express
Access-Control-Allow-Origin: *
Cache-Control: max-age=3, must-revalidate
App-Version: 0.3.94
Content-Type: application/json; charset=utf-8
Content-Length: 164
Vary: Accept-Encoding
Date: Wed, 09 Nov 2016 12:34:20 GMT
Connection: keep-alive
{"token":"eyJ0eXAiOiJKV1QiLCJhbGciOiJIUzI1NiJ9.eyJpZCI6MSwiaWF0IjoxNDc4Njk0ODYwLCJuYmYiOjI4NDg5ODQsImV4cCl6Mjk
zNTM4NH0.gi5JpApGP8Tcttvw4IW6FK9Idv2BhVd8vWy7PBim1M4"}
```

To receive information about the DCX such as its description, location, and firmware version, you can use the System information request. For the DCX to accept the request you must provide the token that was received when you authenticated. Replace <TOKEN> in the request below with the token provided.

#### **Request:**

```
GET /api/system/systemInfo HTTP/1.1
Host: 192.168.1.22
Accept: application/json
Content-Type: application/json
Authorization: Bearer <TOKEN>
```

#### **Response:**

```
HTTP/1.1 200 OK
X-Powered-By: Express
Access-Control-Allow-Origin: *
Cache-Control: max-age=3, must-revalidate
App-Version: 0.3.94
ETag: "b9-YuTkFdP1UR66Ii5k40eZ4Q"
Access-Control-Expose-Headers: ETag
Content-Type: application/json; charset=utf-8
Content-Length: 340
Vary: Accept-Encoding
Date: Wed, 09 Nov 2016 15:59:08 GMT
Connection: keep-alive
{"description":"BlackBox
```

To connect a Receiver to a Transmitter, you use the consoles request in the following format...

# /api/consoles/{id}/switch

{id} = The port number that the console is connected to.

In the body of the request, you specify the computers id. E.g. the port number it is connected to and the view mode which can be VIEWONLY, SHARED, EXCLUSIVE or PRIVATE. The response will be 204 "No Content" if it is successful.

## **Request:**

```
POST /api/consoles/1/switch HTTP/1.1
Host: 10.0.10.14
Connection: keep-alive
Content-Length: 48
Content-Type: application/json
Accept: application/json
Authorization: Bearer <TOKEN>
{
"computerId": 1,
"mode": "VIEWONLY"
}
```

#### **Response:**

```
HTTP/1.1 204 No Content
X-Powered-By: Express
Access-Control-Allow-Origin: *
Cache-Control: max-age=3, must-revalidate
App-Version: 0.3.94
Date: Wed, 09 Nov 2016 15:46:15 GMT
Connection: keep-alive
```

# **More Information**

There are many resources on the internet on how to use RESTful (Representational state transfer) API's/webservices.

Below is a list of useful resource links: https://en.wikipedia.org/wiki/Representational\_state\_transfer https://www.tutorialspoint.com/restful/restful\_introduction.htm http://restcookbook.com/
